**C-66**

**FOR CULTIVATING HOEING RIDGING COVERING**

## SPECIAL FEATURES

The frame and tractor form a well balanced outfit with high manoeuvrability for the most accurate row crop work.

Easily and quickly attached or removed from the tractor by one man — no spanners are needed.

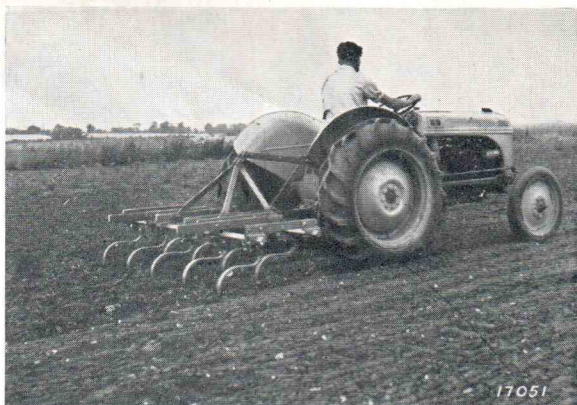

Frame has ample strength to withstand years of hard service.

Power lift controlled by finger pressure. Ample clearance in the lifted position for easy transport.

Constant depth automatically maintained on uneven land.

Special fin stabilises frame in work and counteracts side draught.

All tools quickly interchangeable and adjustable to suit varying widths of rows.

Cultivating with the C66.

Ridging with the C66.

### CULTIVATING.

When cultivating, nine spring steel taper-tines are normally fitted. The points are  $2\frac{1}{4}$ " wide and are reversible.

### HOEING.

The normal hoeing attachment enables four rows to be worked simultaneously. When hoeing, accurate depth adjustment is necessary and the attachment includes two pneumatic tyred wheels independently adjustable for depth, and lifting chains which are used in place of the tractor lifting rods.

### RIDGING.

Three bodies are usually fitted. They are adjustable for pitch, width and spacing to suit individual requirements.

A marker attachment is supplied.

### COVERING.

For potato cultivation, an attachment consisting of three bodies for splitting the ridges and covering are available. These are adjustable for pitch, width and depth and can be spaced to suit the rows.

### STEERAGE ATTACHMENT.

This attachment can be supplied and is recommended for use with the hoeing attachment. It is fitted with a seat and the operator has the rows of plants in full view.

*Present day Manufactures include*

SHARE PLOUGHS	DISC PLOUGHS	CULTIVATORS	DISC HARROWS	SUB-SOILERS
POTATO DIGGERS	MOLE DRAINERS	TOOLBAR FRAMES		GARDEN TRACTORS
